

20 Bond Street, Sydney

Case Study

In an effort to attract new tenants after Macquarie Bank moved into their own building, the previous home of the Sydney Stock Exchange underwent a significant facelift to reinvigorate the building as one of Sydney's premier office locations. As part of this redevelopment, record Automatic Doors was responsible for the supply and installation of a Crystal Series glass roof revolving door and 3 record STA 20 automatic sliding door entrances.

The new glass lobby box starts at the building line on the George Street side of the building, 10m long and 7m high, with a sliding door entrance for disabled access and emergency egress. The sliding door is supported off a steel beam suspended between the two adjacent steel mullions with a finished stainless steel pelmet.

On the Bond Street elevation, a 3600mm diameter Crystal Series automatic revolving door is the main entrance to the building lobby. Featuring a glass roof and steel portal frame, this revolving door is the perfect accompaniment to the glass box and provides the commercial lobby with an impressive main entrance.

Further along this facade is a second automatic sliding door for the entrance to Fitness First, with glass balustrading installed to the stairs leading down. Returning onto the Pitt Street elevation is another 10m long facade of various heights, with stairs leading up to another automatic sliding door entrance.
