

Middleman Cafe & Function Centre, Scoresby

Case Study

The Middleman Cafe & Function Centre, at the Caribbean Park Office Park in Scoresby, previously had two pairs of automatic swing doors to the entries that were struggling to operate in high winds. record Automatic Doors was selected to remove these swing doors and replace with two manually operated Diamond Series revolving doors to provide a more reliable entrance that also provides an important airlock buffer from the external winds and cold temperatures. Due to the small diameter of these doors, manual operation was selected to provide a safer entrance that was cheaper to install and requires less ongoing service and maintenance.
