

Crown Towers Hotel

Case Study

As part of the redevelopment of the Crown Entertainment Complex in Melbourne, record installed 7 of its Diamond Series revolving doors, including a 4000mm diameter door to the main entry of the Crown Towers luxury hotel.

The high quality finishes used within the lobby are without peer and to complement this design, the architects, Bates Smart, specified record's Diamond Series revolving door as the striking main entrance for the hotel's guests, ensuring an impressive first impression.

This large 3 wing revolving door provides plenty of space for large groups of people to use the door at once, or for people with suitcases to easily use the door. The door rails and glass trims are clad with mirror stainless steel.
