

Grosvenor Place

Case Study

The upgrade of the existing foyer at Grosvenor Place was many years in the making and automatic sliding, swing and revolving doors, from record Automatic Doors, feature extensively to the various entry points of the building. For the rear entrance off Harrington Street, a freestanding curved sliding door entrance was specially designed and built using mirror stainless steel cladding to the door structure, canopy fascia, roof and sidewalls with a record RST 20 automatic curved sliding door operator supporting curved frameless glass bi-parting door panels. The ceiling panels are fitted with LED lights to provide a unique “starlight” feature, to match the five revolving doors installed to the other entries.
