

360 Collins Street - plaza entrance

Case Study

When the team at Bates Smart in Melbourne wanted record Diamond Series revolving doors to the plaza entry of 360 Collins Street, to match the doors installed to the main entry, but weren't able to because of existing floor slab restrictions, we set to work designing a new revolving door that would be as frameless as possible, while still have the drive motor mounted above in a conventional canopy design.

The result is record's latest revolving door model, the Hybrid Series, which features frameless glass sidewalls recessed into the floor, like the Diamond Series, but with a solid canopy on top, like the Fullview Series.

Without standard entry posts, freestanding bollards are required at each entry for the slow speed and emergency stop buttons.
