

Northpoint, North Sydney

Case Study

For the Pacific Highway entrance to redeveloped Northpoint Tower in North Sydney, a record Automatic Doors was engaged to supply and install a Fullview Series revolving door in a black powdercoat finish.

To provide additional free egress in an emergency, an automatic wind back door wing was provided, with UPS battery backup to ensure operation in the event of a power failure. This unique windback feature can be activated automatically via a Fire Trip or BMS signal, or via a secondary key switch mounted on the internal door mullion (pictured below).

In addition to this revolving door entrance, record Automatic Doors was also selected to provide a range of TSA 22 telescopic and STA 20 single sliding doors, 12 in total, to various entries throughout the complex, including the food court, Woolworths, Westpac and end of trip facilities.
