

2 Market Street, Sydney

Case Study

The redevelopment of the Grade A commercial building 2 Market Street Sydney, completed in 2007 was a culmination of four phases including a new six storey commercial building and upgraded lobby entrances to both the Market Street and Kent Street frontages.

record Fullview Series revolving doors were selected by the architects for both of these entrances. At Kent Street an imposing 4200mm diameter 4 wing revolving door, in a finished stainless steel finish, was installed to maximise pedestrian traffic flow. At 4190mm high, the revolving door spans the full height of the lobby entrance with custom designed frosted glass ceiling panels, illuminated from within the canopy, providing a striking entrance feature.

For the Market Street entrance, a smaller 3000mm 3 wing diameter Fullview Series door, in a powdercoat finish, was installed with the standard aluminium fixed ceiling panels and LED spot lighting within the centre rotating ceiling.
