

100 Mount Street, North Sydney

Case Study

100 Mount Street is a 34 storey commercial office building located in the heart of North Sydney, owned by Dexus. Built by Laing O'Rourke and designed by Architectus, the striking ground floor lobby, at 8 metres tall, features large frameless glass assemblies to maximise natural lighting levels, an imposingly large LED screen for the display of artwork and a combination of automatic sliding, swing and revolving doors supplied and installed by record Automatic Doors.

To the Spring Street entrance of the lobby, two automatic bi-parting sliding door systems were installed with 19mm frameless glass door panels weighing 200kg each.

To provide the lowest possible pelmet heights for automatic doors of this weight, record installed four STA 20 DUO single sliding operators which were then synchronised to work together as two automatic bi-parting door operators.
