

Architectus Office, Melbourne

Case Study

For the new Melbourne office of the architecture firm Architectus at 385 Bourke Street, a large automatic single sliding door entrance from the lift lobby was installed by record Automatic Doors.

The 3000mm wide x 2950mm high x 240kg aluminium framed sliding door panel is supported off record's STA 22 heavy duty operator.

In normal operation the operator works off combined radar/safety sensors mounted off the pelmet. After hours access is via push button inside and a card reader mounted in the lift lobby.

The project was undertaken by Schiavello and designed by Architectus, of course.
